#### **NEW QUESTION: 1**

Which of the following statements about storage in linked clones are correct is

**A.** The parent volume and template of a linked clone desktop must be in the same data store

- B. The differential volume and template of a linked-clone desktop must be in the same data store
- C. The differential volume of a linked clone desktop, the parent volume and template must be in the same data storage
- D. The differential volume and parent volume of a linked-clone desktop must be in the same data storage

**Answer: D**

**NEW QUESTION: 2**

Which of the following is true regarding linked-clone desktops? (Select two)

- A. The differential volume and parent volume of a linked-clone desktop must be in the same data store
- B. AAA new-model desktops, the differential volume and parent volume of a linked-clone desktop must be in the same data storage
- C. Cisco Catalyst 9300 switches support up to 100 linked-clone desktops per switch
- D. The differential volume and template of a linked-clone desktop must be in the same data store

**Answer: D**

**NEW QUESTION: 3**

Auto Scaling groups can be configured to launch multiple instances of an Amazon EC2 instance type. How many instances of an Amazon EC2 instance type can an Auto Scaling group launch at the same time? (Select two)

- A. 10
- B. 14
- C. 7
- D. 11

**Answer: D**

Explanation:

Explanation

If an Auto Scaling group is launching more than one instance, the cool down period for each instance starts after that instance is launched. The group remains locked until the last instance that was launched has completed its cool down period.

In this case the cool down period for the first instance starts after 3 minutes and finishes at the 10th minute (3+7 cool down), while for the second instance it starts at the 4th minute and finishes at the 11th minute (4+7 cool down). Thus, the Auto Scaling group will receive another request only after 11 minutes.
