NEW QUESTION: 3

Your company has a main office.

The main office is located in a building that has 10 floors.

A datacenter on the ground floor contains a Windows Server 2012 failover cluster.

The failover cluster contains a DHCP server resource named DHCP1.

All client computers receive their IP addresses from DHCP1.

All client computers are part of the 131.107.0.0/16 IPv4 subnet.

You plan to implement changes to the network subnets to include a separate subnet for each floor of the office building.

The subnets will connect by using routers.

You need to recommend changes to the DHCP infrastructure to ensure that all of the client computers can receive their IP configuration by using DHCP.

What should you recommend?

More than one answer choice may achieve the goal.

Select the BEST answer.

A. Install a remote access server on each floor.

Configure a DHCP relay agent on each new DHCP server.

Create a scope for each subnet on DHCP1.
