- A. Azure ADç®;ç•†ã,»ãf³ã,¿ãf¼ã•®ã,»ã,-ãf¥ãfªãf†ã,£ã,°ãf«ãf¼ãf-
- B. Microsoft 365ç®;ç•†ã,»ãf³ã,¿ãf¼ã•®ã...•ã,fãfªã,¹ãf^

- * Users must be prevented from inviting external users to view company data. Only global administrators and a user named User1 must be able to send invitations
- * Azure Advanced Threat Protection (ATP) must capture security group modifications for sensitive groups, such as Domain Admins in Active Directory
- * Workload administrators must use multi-factor authentication (MFA) when signing in from an anonymous or an unfamiliar location
- * The location of the user administrators must be audited when the administrators authenticate to Azure AD
- * Email messages that include attachments containing malware must be delivered without the attachment
- * The principle of least privilege must be used whenever possible

NEW QUESTION: 3

When judging the old and new LSA, the serial number parameter and the age parameter will be used. Which of the following statements about the two parameters is correct?

- A.** When the router receives an LSA age set to 360s, it means that the LSA is unavailable.
- B.** When the router receives two LSAs, the serial number is the same, the checksum is the same, and the smaller the age, the better.
- C.** Both the serial number and the age parameter can judge the LSA is old or new, and the router preferentially compares the sequence parameters, the bigger, the better.
- D.** If the serial number of the LSA reaches the end value of 0x7FFF, the current router advertises the age of 3600s for lsa.

Answer: B

NEW QUESTION: 4

Scenario

A travel company specializes in providing complete holiday packages to meet customer requirements. There have been instances over the past year where the business has been unable to process holiday bookings due to failure of the IT services. Sales have been lost and the failure has been raised at board level. The IT director has assured the board that the situation will be rectified.

Most holiday bookings are made either by telephone via the company's call centre or through a dedicated website. Both interface with the same back-end booking-processing service. Apart from the call centre and website, the main business services map onto organizational departments and cover: marketing, finance, business operations and central administration.

After some initial investigation within the IT organization, it

is clear that the intermittent failures, which were related to a lack of capacity, have occurred during exceptional peak holiday booking periods. The IT organization is not certain when or if these are going to occur in the future. Some booking periods are predictable, such as those associated with promotional offers. Other patterns are totally unpredictable as they often coincide with bad weather being experienced where customers live.

You have been asked how the activities of demand management, based on ITIL practices, can be used to address this issue. Refer to Scenario

Which one of the following options is the BEST set of actions required to resolve the issue?

A. Identify and understand the PBA resulting from metrics of all the IT services. Ensure that the volume, frequency and location of service use is taken into account.

Gain an understanding of how the PBA relate to the use of the IT assets especially the hardware and software that may be the cause of the IT failures.

Once these activities have been completed, the PBA will be used to plan and implement sufficient capacity to meet all demand at all times.

Discuss the risks associated with failing to meet demand with capacity management and technical staff. Reach agreement on how to avoid a repeat of the IT failures caused by demand at busy periods.

B. Immediately implement demand management, document the process and allocate roles and responsibilities.

The demand manager should initiate an activity to identify and understand user profiles resulting from business use of the IT services. Code the user profiles linking them to the associated business roles.

Match the user profiles to the IT services and analyze any shortfall in capacity required to meet the business objectives. Create a business case for the additional resource required to exceed the business demand for the IT services to account for unpredictable business activity.

Work with service portfolio management and financial management to agree on the approval of the investment and initiate the project to acquire all the additional resources.

C. Identify the pattern of customer enquiries for holiday bookings and the resulting volume, frequency and location of staff activity. Document these as patterns of business activity (PBA) Gain an understanding of the different roles that are performed by staff from all business units and how these relate to the PBA for all business processes.

Use this information to identify any shortfall in capacity and create cost estimates of additional resource required to enable the IT services to meet the PBA.

Recommend that, where PBA are very predictable, investment should be made in additional resource.

Where PBA are unpredictable, the risks associated with failing to meet demand should be discussed with the business managers,

and mitigation actions agreed.

D. Identify the pattern of customer enquiries for holiday bookings and the resulting volume, frequency and location of staff activity. Document these as PBA.

Gain an understanding of the different roles that are performed by the call centre staff and how these relate to the PBA for the call centre business processes.

Use this information to identify any shortfall in capacity and create cost estimates of additional resource required to enable the IT services to meet the PBA.

Discuss the risks associated with failing to meet demand with the business managers. Reach agreement on how to avoid a repeat of the IT failures caused by demand at busy periods.

Answer: C
