- C.** Output generation is an application service that is realized in a joint effort of the Policy administration application and the Financial application
- D.** Output generation is explicitly modelled as the collective behavior of the application components: Policy administration application and Financial application

Answer: B

NEW QUESTION: 2

Ann, an employee, is cleaning out her desk and disposes of paperwork containing confidential customer information in a recycle bin without shredding it first. This is MOST likely to increase the risk of loss from which of the following attacks?

- A.** Tailgating
- B.** Dumpster diving
- C.** Shoulder surfing
- D.** Spoofing

Answer: B

Explanation:

Dumpster diving is looking for treasure in someone else's trash. (A dumpster is a large trash container.) In the world of information technology, dumpster diving is a technique used to retrieve information that could be used to carry out an attack on a computer network. Dumpster diving isn't limited to searching through the trash for obvious treasures like access codes or passwords written down on sticky notes. Seemingly innocent information like a phone list, calendar, or organizational chart can be used to assist an attacker using

social engineering techniques to gain access to the network. To prevent dumpster divers from learning anything valuable from your trash, experts recommend that your company establish a disposal policy where all paper, including print-outs, is shredded in a cross-cut shredder before being recycled, all storage media is erased, and all staff is educated about the danger of untracked trash.

NEW QUESTION: 3

You run the Get-SendConnector cmdlet and you receive the following output.

You need to recommend which actions are required to secure email connectivity between the contoso.com SMTP domain and the fabrikam.com SMTP domain.

Which two actions should you recommend? Each correct answer presents part of the solution.
