**NEW QUESTION: 1**
You administer a solution deployed to a virtual machine (VM) in Azure. The VM hosts a web service that is used by several applications. You are located in the US West region and have a worldwide user base.
Developers in Asia report that they experience significant delays when they execute the services.
You need to verify application performance from different locations.
Which type of monitoring should you configure?
**A.** Endpoint

**B.** Disk Read
**C.** Average Response Time
**D.** Network Out
**E.** CPU
**Answer: A**
Explanation:
Explanation/Reference:
Explanation:

The question states: "You need to verify application performance from different locations". The question is not asking you to determine WHY the application is slow, it's asking you to 'measure' the performance from different locations.
Endpoint Monitoring monitors your server with HTTP Get requests from locations that you choose.
