If time be of all things the most precious (CRISC exam cram), wasting of time must be the greatest prodigality, our company has placed high premium on the speed of delivery.

NEW QUESTION: 1

You have a server named Data1 that runs a Server Core Installation of Windows Server 2012 R2 Standard. You need to configure Data1 to run a Server Core Installation of Windows Server 2012 R2 Datacenter. You want to achieve this goal by using the minimum amount of administrative effort. What should you perform?

- A. An offline servicing by using Dism
- B. A clean installation of Windows Server 2012 R2
- C. An online servicing by using Dism
- D. An upgrade installation of Windows Server 2012 R2

Answer: C

Explanation:

- A. Not least effort
- B. Not least effort
- C. `dism /online /set-edition`
- D. offline would be less ideal and more workex: `DISM /online /Set-Edition:ServerEnterprise /ProductKey:489J6-VHDMP-X63PK-3K798-CPX3Y` Windows Server 2008 R2/2012 contains a command-line utility called DISM (Deployment Image Servicing and Management tool). This tool has many features, but one of those features is the ability to upgrade the edition of Windows in use. Note that this process is for upgrades only and is irreversible. You cannot set a

Windowsimage to a lower edition. The lowest edition will not appear when you run the /Get-TargetEditions option. If the server is running an evaluation version of Windows Server 2012 R2 Standard or Windows Server 2012 R2Datacenter, you can convert it to a retail version as follows: If the server is a domain controller, you cannot convert it to a retail version. In this case, install an additional domain controller on a server that runs a retail version and remove AD DS from the domain controller that runs on the evaluation version. From an elevated command prompt, determine the current edition name with the command DISM /online /Get-CurrentEdition. Make note of the edition ID, an abbreviated form of the edition name. Then run DISM /online /Set-Edition:<edition ID> /ProductKey:XXXXXXXXXX-XXXXXXXXXXXXXXXXXX /AcceptEula, providing the edition ID and a retail product key. The server will restart twice.
