NEW QUESTION: 1

What are two important guidelines to follow when implementing VTP? (Choose two.)

- A.** Enabling VTP pruning on a server will enable the feature for the entire management domain.
- B.** When using secure-mode VTP, configure management domain passwords only on VTP servers.

C. All switches in the VTP domain must run the same version of VTP.

D. Use of the VTP multidomain feature should be restricted to migration and temporary implementation.

E. CDP must be enabled on all switches in the VTP management domain.

Answer: A,C

Explanation:

Enabling VTP pruning on a VTP server enables pruning for the entire management domain. Making VLANs pruning-eligible or pruning-ineligible affects pruning eligibility for those VLANs on that trunk only (not on all switches in the VTP domain). All switches in a VTP domain must have the same domain name, but they do not need to run the same VTP version.

NEW QUESTION: 2

While developing obscure risk scenarios, what are the requirements of the enterprise?

Each correct answer represents a part of the solution. Choose two.

A. Have capability to cure the risk events

B. Have capability to recognize an observed event as something wrong

C. Be in a position that it can observe anything going wrong

D. Have sufficient number of analyst

E. Explanation:

The enterprise must consider risk that has not yet occurred and should develop scenarios around unlikely, obscure or non-historical events. Such scenarios can be developed by considering two things: Visibility Recognition For the fulfillment of this task enterprise must: Be in a position that it can observe anything going wrong Have the capability to recognize an observed event as something wrong

Answer: B,C,E

Explanation:

and A are incorrect. These are not the direct requirements for developing obscure risk scenarios, like curing risk events comes under process of risk management. Hence capability of curing risk event does not lay any impact on the process of development of risk scenarios.
