**NEW QUESTION: 1**
Which of the following would provide the BEST evidence for use in a forensic investigation of an employee's hard drive?
**A.** Bit-stream copy of the hard drive
**B.** Prior backups

**C.** Memory dump to an external hard drive
**D.** A file level copy of the hard drive
**Answer: B**

**NEW QUESTION: 2**
Which two options are unicast address types for IPv6
addressing?(Choose two)
**A.** Static
**B.** Global
**C.** Dynamic
**D.** Link-local.
**E.** Established.
**Answer: B,D**

**NEW QUESTION: 3**
A company is currently running a production workload on AWS
that is very I/O intensive. Its workload consists of a single
tier with 10 c4.8xlarge instances, each with 2 TB gp2 volumes.
The number of processing jobs has recently increased, and
latency has increased as well. The team realizes that they are
constrained on the IOPS. For the application to perform
efficiently, they need to increase the IOPS by 3,000 for each
of the instances.
Which of the following designs will meet the performance goal
MOST cost effectively?
**A.** Create a new Amazon S3 bucket and move all the data to this
new bucket. Allow each instance to access this S3 bucket and
use it for storage.
**B.** Change the type of Amazon EBS volume from gp2 to io1 and set
provisioned IOPS to 9,000.
**C.** Increase the size of the gp2 volumes in each instance to 3
TB.
**D.** Create a new Amazon EFS file system and move all the data to
this new file system. Mount this file system to all 10
instances.
**Answer: C**
Explanation:
A: IO1 or provisioned IOPS SSD is more expensive.
B: GP1 with 2TB volumes has 6000 IOPS. If we add additional 1TB
it will increase by another
3000 IOPS. Note: Bursting and I/O credits are only relevant to
volumes under 1,000 GiB, where burst performance exceeds
baseline performance.
C\D: Not enough information is actually provided for us so we
don't know if the instance can use shared storage or not.
