NEW QUESTION: 2

Your company has purchased and implemented Fusion Sales. During Beta testing, your company received feedback that a button in the sales catalog is unclear and confusing. You have been assigned to re-label the text in every button instance. Identify the two steps that you will take to accomplish this task.

- A. Access the Oracle Composer by navigating to a page that displays the button. Select Administration > Customize from Fusion's global area.
- B. Navigate to the Setup and Maintenance Overview page > Manage Product Group Lookups page Add a new button label value by using Add item Label Values.
- C. Navigate to the Product Group Administration > Display Options tab to Specify the product group to be updated.
- D. Set the visibility level to Site.
- E. Navigate to the Product Group Administration page and use Usage Functions to override the button label.

Answer: B,C

Explanation:

B: Example:

Change the Display Options

1. Select the catalog from the Product Group Administration page and lock it.

Megan chooses the Loveseats catalog.

2. Create a new entry in the Display Options tab.

Megan creates a record and names it Hide Availability.

3. From the Applies To subtab, select the usage that this display option must be applicable to.

Megan selects the Base usage.

4. From the Functions tab, select the Availability Engine Code function and assign Do Not Run as its value.

5. Save and publish the ComfyGooseCatalog.

B, D: How can I customize button labels in the catalog?

You can add custom labels for your catalog by specifying them in the Miscellaneous tab of Display

Options(B). For example, you can change the default Add to Cart label and can select a different

label such as Add to Shopping Cart. You can add an additional value for the button label from the

Manage Product Group Lookups page from the Setup and Maintenance Overview page(D). You

can enter a new value using the lookup Add Item Label Values.

Once done, you can navigate to

the product group administration to either override the button label for the entire catalog via the usage functions or to a specific product group from the display options tab.

Apart from customizing button labels, you can also set the number of items to display per page from the Miscellaneous tab.

NEW QUESTION: 3

Note: This question is part of a series of questions that present the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario

You are migrating an existing on-premises data warehouse named LocalDW to Microsoft Azure. You will use an Azure SQL data warehouse named AzureDW for data storage and an Azure Data Factory named AzureDF for extract, transformation, and load (ETL) functions.

For each table in LocalDW, you create a table in AzureDW. On the on-premises network, you have a Data Management Gateway. Some source data is stored in Azure Blob storage. Some source data is stored on an on-premises Microsoft SQL Server instance. The instance has a table named Table1.

After data is processed by using AzureDF, the data must be archived and accessible forever. The archived data must meet a Service Level Agreement (SLA) for availability of 99 percent. If an Azure region fails, the archived data must be available for reading always. The storage solution for the archived data must minimize costs.

End of repeated scenario.

Which three actions should you perform in sequence to migrate the on-premises data warehouse to Azure SQL Data Warehouse? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation
